

C | CB

Our CO₂ incubators simulate natural conditions, where many perfect details make up the sum total. We also fuse together the details by amalgamating the growth parameters such as CO₂, temperature and humidity into a finely tuned interaction that we call “natural simulation.” This is a process that we have developed and patented, unparalleled in our industry and the closest thing to natural conditions.

BINDER Scientific: CO₂-incubators

C series:

The C 150 sets the “New Standards for Cell Cultivation”: BINDER took the leading edge technology of true sterilization (at 180 °C) and designed it into a new “Laboratory Standard for CO₂-incubators”. Routine cell culture applications will now be without the threat of contamination.

CB series:

The CB series is the premium class for all sensitive incubation applications. These incubators are suited for universal use in the laboratory, with an ‘extra’ inprocess control and safety for primary cell cultivation.
